Introduction to FRS

The crypto world needs a transformation where users can work with any blockchain seamlessly—more than it needs a dominant network. NFT platforms, Play-to-earn games, and DApps have attracted mass attention but have not achieved mass adoption due to scalability, cost (high gas fees), and user experience issues. Even on Ethereum, the most extensively used smart contract platform, not many NFTs and DApps have seen mass adoption. There are a few cases where a few applications temporarily succeed, but they begin messing up the whole network during massive traffic.

Typically, this indicates that even the most unconventional and widely used platforms are not yet ready for widespread adoption. Alternatively, a few ecosystems possess higher transaction throughput, but they settle on decentralization to enhance performance.

PXS Network endeavors to solve these scalability, cost, and usability issues while not compromising on decentralization. Right now, the various blockchains can't yet connect to one another. But thanks to so-called layer zero protocols, this interoperability will become reality.

It offers a better scaling solution for existing platforms to provide scalability and a superior user experience for NFTs, Gaming Platforms, DApps, and other user functionalities.

FRS is a decentralized, transparent project aiming at profits for everyone. The project is based on the bnb chain token making it a safe and reliable investment for everyone. The architecture designed for PXS allows the project to be scaled dynamically by adding decentralized applications that can be plugged in at any time to disrupt setups of business models. The dApps also allow addition of new features to the project. The project uses native token, which is norm on Binance Smart Chain that broadens, the most well-known Ethereum token norm. You can consider it a diagram for tokens that characterizes how they can be spent, who can spend them, and different principles for their use. Because of its similitude to Binance Chain's BEP-2 and Ethereum , it's viable with both. It was imagined as a specialized determination for Binance Smart Chain, fully intent on giving an adaptable organization to developers to dispatch a scope of various tokens.

The FRS development team has chosen to deploy on Binance Smart Chain initially and then on Ethereum to use

Then, the team will launch the blockchain, which can connect to other blockchains seamlessly. It is foreseen to allow instant transfers, exchange, and conversion of digital assets and cryptocurrencies in the future. FRS aims to provide NFT Mint Engine, Marketplace, Gaming platform, Staking, Farming, Wallet, Payment APIs & SDKs identity solutions, and other enabling solutions that allow simple users to design, implement and migrate on base platforms like Ethereum. The primary objective of forming PXS Network is to improve the user experience and this is where most of the blockchain lags.

NFT

Non-fungible tokens (NFTs) are blockchain-based digital assets that represent both physical and intangible things, such as virtual kittens and digital collectable cards, as well as crypto art and in-game items. The NFT market has grown to be a multibillion-dollar enterprise. It is simple to create an NFT and circulate it. Our new method of creating and distributing NFTs via gamers who act as miners will increase the rarity and value of our beloved NFTs. A new ecosystem has entered the conversation, one that will enable gamers and all content creators to profit from their valuable work

New methods to enhance the value

FRS offer an opportunity to gamers via NFT to create and sell their art. This increases the value of NFT assets. FRS will have galleries for artworks based on NFTs which are known as tokenized artworks, they are novel artistic manifestations marked and connected by the gamers to tokens on a public blockchain. This takes into consideration the ownership and history of these non-fungible tokens to be followed and checked, and for ownership of the art to be moved starting with one individual or group then onto the next. As numerous makers will bear witness to, computerized extraordinariness or shortage on the web is truly challenging to accomplish given the straightforwardness with which advanced media can be copied and dispersed. Blockchains address this by putting away a completely obvious ownership history of a token and its related media. By keeping the token in your computerized wallet, you can demonstrate your ownership of a novel advanced creation or exchange it as you see fit.

NFT Minting

Gamers will take on the role of miners. They will have the opportunity to compete amongst other players in games, virtual games, competitions, challenges and many more. There will be numerous real-time obstacles. In one of the game modes, players can compete in battle royal against a selected pool of players ranked according to their level

NFT Ecosystem

Creators will be able to submit and create their own game modes and NFTs. There will be two methods for mining NFTs after they are generated. The first method of mining new NFTs is for players to earn cards by completing objectives and missions inside the game of choice. Our smart contracts will dictate once the objective/mission is completed inside the game. FRS platform offers these opportunities in its ecosystem to mint NFTs while playing the game of their choice and simply passing the levels.

Motivation

The reason to move onto a decentralized coin is that, Ethereum basically as elective method of cash, as digital gold. It required numerous years to turned out to be more significant. In any case, it's more than that, these days it's turned out to be new culture, local area, new vector for devotees and innovation and that's just the beginning. With the appearance of Ethereum and other crypto currencies opened the chance for improvement of decentralization. On opposite side, decentralization implies a few dangers. Expansion is the correct method to lessen chances. Also, decentralization ought not be imposing business model.

What \$FRS token means to give is right of decision in a blockchain world, decentralizing with an underlying savvy agreement and expansion of digital actives of client and considerably more. Decentralizing permitting users to utilize any of the instruments depicted above.

It required numerous years for Ethereum to turn out to be more trusted and itself isn't broadly embraced outside the web yet. Be that as it may, crypto lovers, like us, need to advocate the blockchain innovation, instruments and more external the web also.

PROBLEMS

With the development and growth of the industry existing problems have become more and more obvious:

Lack of liquidity and supply

There are many transnational sports asset transactions, and the settlement process is complicated. Due to the problems of regional and market development, the global asset transactions cannot be quickly circulated. For example, when a Swiss fan wants to buy the jersey of Real Madrid, he needs to find out if there is a purchase channel in Switzerland. If not, he needs to go to an overseas website, which involves many complicated matters such as cross-border transaction, settlement and finding trusted intermediaries.

Unfair pricing mechanism

Existing mechanisms lack fully market-oriented pricing processes and forecasting methods for assets. The trading of assets is centrally monopolized, and users cannot participate in the trading of assets and profit through the authorized derivatives they buy.

Not transparent information & lack of trust

Centralized institutions are unable to disclose all information. Due to the opacity of information, users cannot ensure that the products they buy are true, so they are faced with the risk of buying fraud or counterfeiting.

SOLUTION

The sports industry is no longer about events, players, tickets, surroundings and all the things related to sports entities, but rather a world full of digital information and assets with value. With the support of the token economy system, any individual participating in the blockchain can participate in the transaction of digital information. This fundamentally changes the business development system and driving logic based on personal trust and institutional trust in the traditional sports industry, breaking the barrier of value transmission and promoting the revolutionary upgrade of the sports industry.

PXS aims to overcome these limitations while accelerating blockchain adoption to grow the Sport and Esport market. We will do this by building an NFT platform where users are able to mint, share, collect, auction and trade without central control, enjoying secure copyright ownership. This copyright protected ownership will be established and guaranteed using NFTs, where every item will have a unique and immutable blockchain identifier.

By providing rewards for completing challenges within the game, the Play-To-Earn economy will revolutionize how people interact

with the economies of their favorite games. A creative designer could create a cool new hat featuring their branding, which would have a finite number of NFT's of the item generated with the game – to be awarded to another player for reaching a certain milestone or achievement. This player could then sell their collectible hat – a share of the profit then being distributed back to the artist

WHY FRS?

NFTS and DApps are offered abundantly, but the current blockchain ecosystem is not prepared to scale to match the demands of end user applications with mass adoption. Moreover, the user experience of NFT market, Gaming platform and DApps are very poor and in no way easily usable for average users. Slow block confirmations, high transaction fees, low scalability and poor user experience are some of the key roadblocks for the mass adoption of blockchain applications. During our blockchain launch, we will provide more details on how the FRS Network intends to solve them. Detailed technical specification will be provided.

STAKING

Staking is the activity of sending a specific token (which could be a LP token, however, can likewise be a stable coin or simply some other token) into a smart contract. It is then secured this contract until you redeem/withdraw it. For this activity, you ordinarily get

rewarded by the proprietor of the smart contract. Staking for the most part includes a lot of funds and can set aside a lot of effort for the development of funds. The staking farm has been implemented here using our own logic, built from the scratch.

INTRODUCTION TO FAIRIES TOKEN (\$FRS)

\$FRS token is a new crypto venture by a group of experts. It's a new addition in the pool of thousands of already existing cryptocurrency coins and tokens. But this is more than a normal crypto token. \$FRS token is actually intended to add value to the life of a normal user. The goals

of FRS token are revolutionary and team is work hard on achieving those goals. These plans will surely impact the lives of normal people. It is creating revolution in the field of Cryptocurrencies, credit cards, and the payment methods that are used to pay for goods and services at grocery stores, merchant shops, nightclubs, and gas stations.

Unlike other crypto tokens, which are highly volatile and their value keeps increasing and decreasing, FRS Coin comes with a plan to control this aggressiveness of the coin. It supports both the long-term and short-term holders of the token and keeps the coin safe from Whale holders who try to decrease the value of the coin within a few months of its launch. Because FRS Coin is built on trust, we want to demonstrate our vision to our holders and invite them to join us on this journey. We worked on this project to create a token that is both practical and useful.

Fairies is a native token for the Neverland, an upcoming NFT market place and NFT gaming platform and also for the FRS Network, an upcoming blockchain and Exchange. A simple, scalable, cross-chain next gen DeFi network designed to bring NFTs and DApps to everyone.

NEVERLAND GAME OVERVIEW

Neverland is history and future based game mixed with a total adventure and sci-fi giving a kickstart for alien based and history games. We are always sure that players will have a great time with this game. Neverland is a game made with love, compassion, and care. Our team is always looking for the ways to search the lost knowledge and better story lines. During the search of best platform for the players, Neverland is born.

The Islands of Neverland is a bunch of floating islands where Fairies and humans coexist peacefully. Each island is a whole different world, but there is something we all have in common – our love for magical creatures and battles! Heroic tamers like yourself travel on airships to the furthest reaches of the Neverland to find the best creatures. Every young tamer dream of becoming the best.. But not everything is fun and peaceful on the islands. Behind the scenes, Pirates, Redcap, Goblins, Hags and other malicious spirits are weaving a dastardly conspiracy against fairies and humans alike. You will need all your friends, your best creature and some special weapons to defeat these wicked. Meet the pixies. Discover and live in Neverland. Earn as much

money as you can with the Play - To - Earn, Stake - To - Earn mechanism. Excitingly, you will contribute to your communities. We brought a game which is made with love and care with an aim to search the former level of storyline and knowledge.

KEY FEATURES OF FRS

Some key features of FRS Coin are:

- Secured and safe: FRS Coin leverages a distributed peer-to-peer consensus network that cryptographically helps in securing every transaction.
- Quick transfer: Instant fund transfer globally is available with the help of fast block execution unlike traditional remittance, unmatched speed, and payment processors.
- Decentralized: Direct transactions among network participants without the presence of a central facilitator are enabled with the help of decentralized technology.
- Easy to use: User-friendly interface intended for seamless Real-world use cases.
- Scalability: Assures scalability for pacing up with the industry's transaction requirements, thereby facilitating mass adoption of cryptocurrency.

RISKS

\$FRS provides a lot of benefits to the investors, but on the other hand, it is not out of risk. At \$FRS, our team believes that we should be transparent and declare the potential risks involved in \$FRS. The blockchain industry is in the initial stage of its regulation. Governments of countries are in the process of studying blockchain technology, and some countries impose restrictions (for example, the United States, China, South Korea).

No legal documents are regulating the crypto industry yet - the laws can appear later and can significantly affect the activities of blockchain projects, including our project. We warn you that such laws can significantly limit and even stop the project activity, we are not responsible for the negative consequences associated with the possible regulation of the industry in the future.

TOKENOMICS

The liquidity pool is created and locked.

- Liquidity 2%
- Marketing 5%
- ADA Rewards 2%
- Buy back 2%

MOON LANDINGS

MIMAS

- ✓ Marketing push to spread awareness
- ✓ Pinksale public presale
- ✓ Pancakeswap listing
- ✓ Third party audit
- ✓ Listing on Coingecko
- ✓ Listing on Pancakeswap
- ✓ Listing on Uniswap

TETHYS

- ✓ NFT Mint Engine Launch
- ✓ NFT Staking and Farming Launch
- ✓ Launchpad
- ✓ NFT Market Place Launch
- ✓ NFT P2E Game Neverland Launch

HYPERION

- ✓ Large influencer marketing push
- ✓ Dashboard to sync all your wallets/exchanges and track your Gains/loss - Beta

✓ Portfolio tracker

RHEA

✓ Increased marketing

✓ Website Redesigning

✓ Gains/loss portfolio tracker full version launch

✓ Tax report generator (Supports all major cost basis method)

DIONE

✓ Exchange Launch

✓ Wallet Launch

✓ Blockchain Launch

Blockchain upgrade and more to come, spread the word, invest, and you can thank us later!

FUTURE GOALS

Right now, we have crypto companies with cards for crypto but it is a little misleading. We want to bridge the gap. We're planning on working with manufacturers in two folds. Firstly, we want to have a legitimate crypto exchange. We also have plans to create a hardware cold storage device with our own wallet as well as apps for handling exchanges, payments, transfer of funds, etc. We will also make this wallet public. Members will be able to see about the net worth in the wallet. We will keep updating about our moves and plans for \$PXS token and holders.

The Android and iOS apps will be launched for Neverland game that will surely bring more excitement and best user experience. Users will be able to enjoy their favorite game right from their smartphones. We are also working on launching the V2 of Neverland game, so new game theme, and excited features are expected to be rolled out in V2 update. We are also working on launching gain/loss portfolio tracker and tax report generator. Sticking to be the main aim of PXS which is to provide the ease and best user experience. There is a lot more expected from PXS.

THANK YOU..!!
